const developer = {

Abdulaziz Hakimov

FULL-STACK DEVELOPER

};

01 Profile

Full-stack developer with Python as my main language, also working with Node.js, Express, React and PostgreSQL. I build complete web products end to end — from database design and APIs to real-time features and the interface. An economics background helps me design products with a clear business and monetization model.

02 Projects

Vezora — Freelance & Job Marketplace — LIVE

vezora.uz · Node.js · PostgreSQL · Prisma · React · Socket.io

- Multi-category platform connecting clients with specialists: design, programming, SMM, repair and more.
- Separate employer and worker roles; real-time chat that blocks phone numbers and messenger contacts to keep deals on the platform.
- JWT authentication; commission and premium-plan monetization model.

Anime Wear — Anime Clothing Store — LIVE

animewear.duckdns.org · Custom build · no CMS · global audience

- Built an online store for anime streetwear and accessories from scratch, with product catalog and checkout.
- Designing a dropshipping flow: order and payment on the site, automatic forwarding to a supplier, direct delivery to the customer.

Restaurant QR Ordering & Table Booking — NEARLY COMPLETE

Web app · QR ordering · booking

- Digital menu with prices; a QR code on every table lets guests order without waiting for a waiter.
- Timed online table booking with a live map of free and busy tables; layout customizable per restaurant.
